Tech Stack

- AWS - EC2, S3, Route53, DynamoDB, Lambda, CodeBuild, CodePipeline, API Gateway, VPC, CloudFront
- Pulumi, CloudFormation
- Git
- HTML, CSS, JavaScript, Python, Bash
- Linux

Skills

Problem Solving

With my current position as well as my past career history, I have learned to have situational awareness and problem solving. I have solved problems from small forgotten details up to complex electrical failures. Through all my trials I have learned two things: Start with the basics, and K.I.S.S it (Keep It Simple Stupid)

Communication

Throughout my day-to-day work, I am continually socializing and working with my peers. Asking what they need or expect from me and what I ask of them. Communicating to a client is paramount for trust and assurance that they are safe and understood. Communication is the key to a well operating and smooth community.

Relevant Experience

Freelance Engineer

May 2022 - Present

Cloudbuddies Inspired Cloud Solution

- Assist design of front end with REACT.js
- Assist in development and design of templates for back-end including but not limited to: AutoScaling groups, Launch Templates, Load balancers,
- Collaborated with team to understand and provide infrastructure needs for development and production environments
- Designed autonomous templates for reusability; region, environment, variables, etc

Slack Reporting Application

github.com/aliciousness/caseyProject

- Infrastructure as code (IaC) using Pulumi/Python
- Designed a Slack App powered by a serverless backend; AWS Lambdas, API Gateway, and DynamoDB
- Wrote an AWS Lambda using Python/Boto3 to process incoming Slack commands and store/administer data
