Tech Stack

- AWS - EC2, S3, Route53, DynamoDB, Lambda, CodeBuild, CodePipeline, API Gateway, VPC, CloudFront, CloudWatch, CloudTrail, Cognito, Inspector, Organizations, KMS
- Pulumi, Terraform, CloudFormation, Ansible, Docker
- Git, Bitbucket
- HTML, CSS, JavaScript, Python, Bash, HCL

Relevant Experience

DevOps Engineer

February 2024 - present

Grand Canyon Education

- Orchestrated the migration of PHP and Node.js CI/CD pipelines from Azure DevOps to GitHub Actions, improving workflow efficiency and reducing deployment times.
- Optimized Docker-based local development environments, reducing deployment failures by 25% through targeted performance enhancements and process automation.
- Configured Traefik as a reverse proxy to automate SSL/TLS certificates for ephemeral Docker environments, strengthening local environment security.
- Developed and deployed GitHub Actions workflows to automate containerized application deployments to AWS ECS, supporting multi-branch development lifecycles.
- Designed and implemented an automated database backup solution using AWS Lambda and S3, ensuring scalable and resilient backup processes.
- Leveraged AWS Systems Manager (SSM) to automate and secure EC2 instance management, improving operational efficiency and security.
- Created custom SSM automation documents to streamline package patching, fleet management, and AMI replication processes across environments.
- Integrated automated testing and security scanning within CI/CD pipelines using industry-standard tools, enhancing code quality and ensuring security compliance.
- Designed and implemented a blue/green deployment strategy for production environments, increasing deployment success rates and minimizing downtime during updates.
- Initiated and implemented an automated testing pipeline leveraging GitHub Actions triggered by pull requests, the Cypress testing framework, and Docker containers, significantly improving testing efficiency and reliability.
- Migrated backup and file archiving systems from on-premises JFrog solutions to scalable and cost-effective AWS S3 cloud storage, enhancing accessibility and reducing infrastructure costs.

DevSecOps Engineer

June 2022 - February 2024

Alpine Cyber Solutions

- Lead the adaptation of Ansible to securely configure a fleet of over 1500 Point of Sale (POS) systems.

[Linkedin](#) | [github](#)

- Developed a dynamic inventory using an API and Python to automate Ansible inventories efficiently.
- Provided support for the implementation of an Azure App Gateway with Web Application Firewall (WAF) enabled in Terraform for external customer domains within the Azure Cloud.
- Designed and implemented logging and monitoring solutions for gateway traffic with Azure, enhancing security and performance.
- Created a robust patching architecture for client machines, complete with reporting features to ensure system integrity.
- Established an automated process for imaging patched POS machines using Packer, GitHub, VMware, Ansible, and PXE, resulting in a remarkable 70% improvement in image deployment efficiency.
- Utilized Bitbucket Pipelines to deploy an OWASP SonarQube container for static code analysis and secret scanning as part of the client's Software Development Life Cycle (SDLC).
- Designed and implemented an AWS Organizations solution to automate development environments, streamlining the process by 80%.

Freelance Engineer

May 2022 - Dec 2022

Cloudbuddies Inspired Cloud Solution

- Assisted in the design and development of a front-end application utilizing a bot communication system built on REACT.js. The bot communicates with the back end, which deploys Infrastructure as Code (IAC) templates using Pulumi.
- Contributed to the development and design of templates for the back end, encompassing elements such as AutoScaling groups, Launch Templates, and Load balancers.
- Collaborated closely with the team to comprehend and address infrastructure requirements for both non-production and production environments.
- Designed autonomous templates with a focus on reusability, streamlining the development process.

Slack Reporting Application

github.com/aliciousness/caseyProject

- Designed a Slack App powered by a serverless backend constructed with Python and Pulumi, making use of AWS Lambdas, API Gateway, and DynamoDB.
- Authored an AWS Lambda function using Python and Boto3 to process incoming Slack commands and manage data effectively.

Resume

github.com/aliciousness/new_website

- Designed and implemented a CI/CD pipeline using GitHub, AWS CodeStarConnect, AWS Codebuild, AWS CodePipeline, and S3.
- Registered a unique DNS for the website utilizing AWS Route53
- Brought the website to the internet by applying AWS Certificate Manager and AWS CloudFront.
